

# New Yorkers for Verified Voting

## Survey Data on the Number of Voters per DRE in Other State Jurisdictions

By Marge Acosta  
NYVV Long Island Representative

The New York State Board of Elections is currently considering the question of the maximum number of registered voters who can be served by each type of voting system. It is essential to correctly determine this number in order to ensure that long lines do not form at the polls at peak voting times. At a meeting on March 27, 2007, New York State Election Commissioners adopted a proposal for public comment suggesting that a single DRE can adequately accommodate 550 registered voters. But data from other states and simulations using queuing theory (the mathematics of waiting lines), have shown that 550 voters per DRE is too large by at least a factor of 2.5!

Jurisdictions in DRE states report problems with long lines, even those using far fewer voters per DRE than the New York State proposal. In order to get some guidance from the practices of other states already using DREs, I contacted election officials in six jurisdictions – Lincoln, Tennessee; Cheyenne, Colorado; Carson City, Nevada; Esmeralda, Nevada; Clark, Nevada; and Palm Beach, Florida – to determine what ratios of registered voters to DREs they use, the length of time spent waiting in lines at the polls, and other relevant data.

The table below gives a simple outline of the key results. The full set of data is presented on the following pages. Of immediate note is that voter to DRE ratios used in other states are significantly smaller than the 550 voters per DRE number proposed by the Board of Elections. Lacking any compelling evidence that New York's DREs will be over twice as fast as any other state, one must conclude that the Board's proposal is far too high and will result in long waiting times and disenfranchised voters.

Since all of the surveyed counties have Early Voting, the actual numbers of voters per DRE are even lower on Election Day than the reported averages. It is significant that 4 of 6 counties use DREs with a VVPAT (which takes additional time for the voter to review), and have on average 175 registered voters per DRE. Of the counties using DREs without VVPAT, Lincoln Tennessee reports on average 328 registered voters per DRE, and Palm Beach Florida reports only 175–375 voters less than the New York State Board of Elections proposal!

These findings strongly suggest that allowing 550 registered voters to vote on a single DRE will bring havoc to New York State's elections, causing long lines and unprecedented voter disenfranchisement.

County and State	Registered Voters	Vendor and DRE	VVPAT	Average Number of Registered Voters per DRE
Lincoln, TN	18,000	ES&S iVotronic	No	328
Cheyenne, CO	1277	Hart eSlate	Yes	213
Carson City, NV	25,000	Sequoia AVC Edge	Yes	184
Clark, NV	803,808	Sequoia Edge II	Yes	179
Esmeralda, NV	667	Sequoia Edge	Yes	74
Palm Beach, FL	779,748	Sequoia Edge	No	175
